

Letter 03/14/83

As per meeting ^, models will be tested ~~by~~ "non-trained" panelists. The models will be designed as follows: SCS-1 mouth-end-piece (40 mm) ^{which consists of} 10 mm filter and 30 mm hollow port for insertion of 40 mm Kapton tube and 30 mm core, ^{will be inserted in the Kapton tube} the core will be constructed with 30 mm capsule and R-13 fuel source baked at 1,000°C.

The aerosol will be B-3 and the grace alumina will be the holding material of B-3 and flavors. Initially, the flavors to be tested are the CO₂ supercritical extracts supplied by Bill Clapp. These extracts
