Gentlemen:

For some time now I have been reading about the suspected connection between cigarette smoking and Lung cancer. For some years I have been a cigarette smoker starting to see newspapers carried full page ads. stating "Cameks are coming"; at which time I shifted to Camels. This must be in the neighborhood of forty years.

A few weeks ago when I went part time, to augment my Social Security income, I had x rays taken of my lungs by the state mobile T B. unit. They notified me that there was something that should have attention by my physician. He had further x rays taken and they decided it was not Cancer.
