PROJECT INFORMATION

PROJECT NO.: CRC: B1021, INBIFO: P 0500/3169

Notes: (a)**Date: 12 Sep.91**

HJH: Further samples of materials of the conditioning room were collected and transported to INBIFO on 11 Sep.91.

Date: 16 Sep.91

HJH: The final dissection of postinhalation recovery rats was performed on 13 Sep.91. The samples for the histopathological investigation were already transported to INBIFO. Those for the biochemical investigation will be transported on 17 Sep.91 by UMU.

Date: 17 Sep.91

NDA: QA check on 13 Sep.91: The final dissection of the rats of the recovery period was carried out in accordance with the protocol and the SOPs. It was thoroughly prepared, well organized and carefully performed.

*** Date: 19 Sep.91**

HJH: Persistence of nicotine and N-nitrosamines in materials from the conditioning room (B7004, P 0500/51228): The nitrosamine extraction procedure used up to now has not been sufficient for some compounds. KRU will test another procedure to improve this using sample material collected today and transported to INBIFO (without the addition of solute or buffer). The nicotine concentrations in the materials show a slight decrease by time.
